Setup Verification

```
docker version
```

```
export DOCKER_USER_ID=  
docker login -u ${DOCKER_USER_ID} docker.io
```

```
minikube version
```

```
kubectl version
```

```
ctlptl version
```

```
tilt version
```

```
helm version
```

Docker

Build the docker image

```
docker build --tag unit-test-js .  
docker images
```

```
docker history unit-test-js:latest
```

Run the docker image

```
docker run unit-test-js:latest
```

Running a shell in the container

```
docker run --rm -it --entrypoint sh unit-test-js:latest
```

Push the docker image

```
export DOCKER_USER_ID=  
docker login -u ${DOCKER_USER_ID} docker.io  
docker tag unit-test-js ${DOCKER_USER_ID}/unit-test-js:0.1  
docker push ${DOCKER_USER_ID}/unit-test-js:0.1
```

Kubernetes

Start your cluster

```
minikube start  
minikube status  
minikube dashboard
```

Run the job, v1

```
kubectlt cluster-info  
export DOCKER_USER_ID=  
export JOB_NAME=test-1  
kubectlt create job ${JOB_NAME} --image ${DOCKER_USER_ID}/unit-test-js:0.1
```

Evaluate the job

```
kubectlt get jobs  
kubectlt get job ${JOB_NAME}  
kubectlt get job ${JOB_NAME} -o json
```

```
kubectl explain job  
kubectl explain job.status
```

Run the job, v2

```
kubectl describe job ${JOB_NAME}  
kubectl apply -f job.yaml
```

Tilt

Use control plane tool (ctlptl)

```
ctlptl apply -f cluster.yaml
```

Run via Tilt

```
tilt up
```

Helm

Create helm chart

```
helm create helm-chart-1
```

Install via helm

```
helm install release-name-1 unit-test-js
```

helm + Tilt
